

## CLEANING & DISINFECTING INITIATIVES

- Activated & Electrolyzed Water process is used during event activity. This process produces a non-toxic, environmentally friendly, multi-surface cleaning and disinfecting solution that meets EPA guidelines for effective use against viruses, bacteria, and other airborne pathogens.
- Elevated cleaning and disinfecting methods are executed throughout the day with an increased focus on high traffic and touchpoint areas including; door handles, countertops, seating areas, tables, escalators, elevators, restrooms, and entries/exits.
- Nightly disinfecting routines which include meeting rooms and event spaces.
- *Electrostatic Disinfection* technology used for enhanced sanitation.
- Customized cleaning and disinfecting needs can be coordinated to fit any event.
- *Needlepoint Bi-Polar Ionization* technology is used in meeting rooms - *completion by Fall 2021*.

## TEAM MEMBERS

- Accredited *GBAC Star™* Facility
- All team members are trained on cleaning and disinfection protocols in alignment with the CDC and Minnesota Department of Health guidelines and industry cleaning standards.
- All team members are committed to providing a clean and safe environment for attendees, contractors, service providers, and co-workers.

## EVALUATION

- Continuous tracking, evaluation, and improvement initiatives are built into our procedures to ensure the MCC is providing the highest cleaning and sanitation policies.
- Routine *ATP Hygiene Monitoring* is performed regularly for quality assurance.
